🚀 SKILLS

HTML, Css, JavaScript, Tailwind-css, React-js, Redux, Node-js, Express, MongoDB,

♥ INTERESTS

I love being part of a business where I can learn about lots of essential things of human nature and how they deal with stress and at the same time provide great good and services to the potential consumers, where I can learn about finance more better and pragmatic way to get more insight of money and over all how the whole thing works indeed.

🧩 ACTIVITIES

I love to read particulary autobiographies of great people who have done something great in their lives, I love to listen informative podcasts as well, I love to write a lot and try to share my thoughts and vision via writing. And I love traveling around different places as well.

🗣 LANGUAGES

English, Hindi, Bengali

🎯 OBJECTIVE

Results-driven software engineer with a strong foundation in computer science and a passion for solving complex problems through innovative software solutions. Seeking a challenging and dynamic role in a forward-thinking company where I can leverage my technical expertise, creativity, and collaborative skills to contribute to the development of cutting-edge software applications and drive business success.

🎓 EDUCATION

bachelor of commerce (honours)

2023

47%

💡 PROJECTS

E-commerce website

I have made plenty of fully functional e-commerce websites by using tools like JavaScript React-js and Next-js and for backend node-js, express and mongodb for storing the user's data.

Fully functional social media application.

I embarked on the journey of replicating the core features of popular social platforms. My project showcases proficiency in frontend and backend development, incorporating user authentication, posting, commenting, and real-time updates. Excited to share the features of this clone as a testament to my JavaScript skills and web development expertise.

Real time chat application

I have made real time chat application as well like other functional chat applications out there. Where you can chat with each other live and after that your all data will be stored in the backend and I have made fully optimized login and logout along with registration functionality on that real time chat application in order to keep the users data secure and safe.

Games

I have made couple of small but compelling games such as tic-tac-toe, snake game and lot more where I used JavaScript and React and for designing the page I used Sass.
